Code Definition

O	Migrants and non-breeding species observed in block during breeding season.
#	Species (male or female) observed in suitable nesting habitat during its breeding season.
X	Singing male present in suitable nesting habitat within safe dates
M	7 or more singing males of a species observed on one day in suitable nesting habitat.
P	Pair observed in suitable nesting habitat during its breeding season.
T	Permanent territory presumed through either defense (e.g. chasing of other birds) or song at same location on at least 2 occasions 7 days or more apart.
C	Courtship behavior or copulation.
V	Visiting probable nest site.
A	Agitated behavior or anxiety calls from adult.
N	Nest building by Bald Eagles or excavation of nest holes by wrens and woodpeckers, and construction of dummy nests.
NB	Nest building or adult carrying nest material.
PE	Physiological evidence of breeding, e.g. highly vascularized, edematous brood patch or egg in oviduct based on bird in hand. (For banders.)
DD	Distraction display or injury feigning.
UN	Used nests or egg shells found. Must be carefully identified, if they are to be accepted.
FL	Recently fledged young (of altricial species) incapable of sustained flight or downy young (of precocial species) restricted to the natal area by dependence on adults or limited mobility.
ON	Adults entering or leaving a nest site in circumstances indicating occupied nest. To be used for nests which are too high (e.g. the tops of trees) or enclosed (e.g. chimneys) for the contents to be seen.
FY	Adult seen carrying food for young, or feeding recently fledged young. Subdivided into CF and FF..
CF	Adult carrying food for young (subcategory of FY).
FF	Adult feeding fledgling (subcategory of FY).
FS	Adult carrying fecal sac.
NE	Nest with egg(s).
NY	Nest with young seen or heard.
